

About the editors

Bradley P. Smith

Dr Bradley P. Smith is a Senior Lecturer in psychology at Central Queensland University (Adelaide campus). He has a background in animal behaviour and comparative psychology, and has been actively conducting research relating to the cognition, behaviour and management of domestic and wild animals for over 15 years. Bradley has a special interest in the intersections between human and non-human animals, including strategies that help foster co-existence between humans and wildlife. Bradley serves as a Category B member of the CQUniversity Animal Ethics Committee.

Helen P. Waudby

Dr Helen P. Waudby is an Adjunct Research Fellow with Charles Sturt University, and a conservation biologist with the NSW Department of Planning, Industry and Environment (DPIE). She has over 20 years' experience in wildlife research ranging from desert rodents and marsupials, to threatened frogs and parasites, and has a particular interest in evaluating and refining wildlife research methods to achieve improved animal welfare outcomes. Helen has served as a Category B member of the DPIE Animal Ethics Committee.

Corinne Alberthsen

Dr Corinne Alberthsen is a national animal ethics coordinator and provides high-quality and contemporary professional advice, training and support to the research community on animal welfare and the ethical treatment of animals used in scientific research. She is actively involved in the evolution of animal welfare policy and procedures relating to both wildlife and laboratory animals. Corinne has participated as an animal ethics committee member or specialist advisor for over 10 years, and is currently executive officer to several animal ethics committees.

Jordan O. Hampton

Dr Jordan O. Hampton is a Research Fellow at the Faculty of Veterinary and Agricultural Sciences, University of Melbourne, and an Adjunct Lecturer with the Harry Butler Institute, Murdoch University. He is a veterinarian and wildlife biologist with almost 20 years' experience working with range of Australian wildlife including desert ungulates, marine mammals and birds of prey. He has a special interest in the management of introduced species and wildlife use. Jordan's research converges on animal welfare science, wildlife management and animal ethics.
