Foreword	iii
About the author	iv
Other books and technical manuals by the author	v
Acknowledgments	vi
Chemical warning	vii
1 Introduction	1
1.1 The feeding manual	1
1.1.1 Aims of the manual	1
1.1.2 Outline of the manual	2
1.1.3 Sources of information	3
1.1.4 Role of the manual in training programs	4
1.2 Nutrients for dairy cows	7
1.2.1 Water	8
1.2.2 Energy	8
1.2.3 Protein	8
1.2.4 Fibre	8
1.2.5 Vitamins and minerals	9
2 Tropical dairy systems	11
2.1 Features of tropical dairy systems	12
2.2 Dairying in the humid tropics, specifically in South-East Asia	13
2.3 Future demands for milk and milk products in South-East Asia	16
2.4 Current farmer returns for fresh local milk in South-East Asia	17
3 Small holder dairying	19
3.1 Features of small holder dairy systems	19
3.1.1 Peri-urban versus rural-based systems	21
3.1.2 Gender roles on small holder dairies	22
3.2 Descriptors of small holder dairy systems	22
3.3 Benefits of intensifying small holder dairying	24
4 What is in feeds?	27
4.1 Dry matter	27
4.2 Energy	29
4.2.1 How energy is measured	29
4.2.2 Types of energy	32
4.2.3 Energy and milk production	32
4.3 Protein	33
4.3.1 Types of protein	33
4.3.2 Measuring rumen degradable protein and undegradable protein	34
4.4 Fibre	34
4.4.1 Types of fibre	35
4.4.2 Measuring fibre	35

4.5	Vitamins and minerals	36
4.5.1	Vitamins	36
4.5.2	Minerals	36
4.6	Essential nutrients and sources summary	36
4.7	Sampling feeds for chemical analyses	37
4.7.1	Fresh forages	37
4.7.2	Dry feeds	39
4.7.3	Silages and wet by-products	39
4.7.4	Hays and straws	39
5	How the rumen works	41
5.1	The digestive system	42
5.1.1	Rumen and the reticulum	42
5.1.2	Microbes of the rumen and the reticulum	43
5.1.3	Rate of digestion	44
5.1.4	Omasum	44
5.1.5	Abomasum	44
5.1.6	Small intestine	45
5.1.7	Large intestine	45
5.2	Carbohydrate digestion in the rumen	45
5.2.1	Structural carbohydrates	46
5.2.2	Storage carbohydrates	46
5.2.3	Soluble sugars	46
5.2.4	The products of carbohydrate digestion	46
5.3	Digestion of protein	48
5.3.1	Microbial protein	49
5.3.2	Dietary protein	49
5.4	Digestion of fats	49
6	Nutrient requirements of dairy cows	51
6.1	Water	52
6.2	Energy	52
6.2.1	Maintenance	52
6.2.2	Activity	52
6.2.3	Pregnancy	53
6.2.4	Milk production	53
6.2.5	Body condition	55
6.2.6	Effect of climatic stress on energy requirements	56
6.3	Protein	57
6.3.1	How milk production affects requirements for RDP and UDP	57
6.4	Fibre	58
6.5	Vitamins and minerals	58
6.5.1	Vitamins	58
6.5.2	Minerals	59
7	How feed requirements change during lactation	61
7.1	Calving to peak lactation	62
7.2	Peak lactation to peak intake	63
7.3	Mid-lactation to late lactation	63
7.4	Dry period	63

8	Growing quality forages	65
8.1	Production benefits from good quality forages	66
8.1.1	Overcoming the high cost of concentrates	66
8.1.2	Milk responses to improving forage quality	67
8.2	The four basic principles of growing quality forages	68
8.2.1	Selection of forage species	68
8.2.2	Preparing for sowing	74
8.2.3	Fertilising the crop	74
8.2.4	Benefits of mixed swards	78
8.2.5	Harvesting the crop	79
9	Making quality silage	83
9.1	What is silage?	84
9.1.1	The four phases of silage making	84
9.2	Why make silage?	85
9.3	Silage storage systems	86
9.4	How much silage should be made?	86
9.5	The ten steps to making silage	87
9.5.1	Harvest the forage	87
9.5.2	Wilt the forage to 30% DM	87
9.5.3	Add a fermentable substrate at ensiling	89
9.5.4	Chop the forage into short lengths	89
9.5.5	Compact the forage as tightly as possible	89
9.5.6	Complete the entire storage quickly	90
9.5.7	Seal storage air tight	90
9.5.8	Maintain airtight seal	92
9.5.9	Feed out a whole face of the storage	92
9.5.10	If silage is unsatisfactory, determine the reason	93
9.6	Silage from by-products	93
9.6.1	Sources of by-products	94
9.6.2	Principles of ensiling by-products	95
9.6.3	Silage from maize crops and maize by-products	96
10	Supplements for milking cows	99
10.1	Choice of supplement	99
10.1.1	Defining the nutritive value of supplements	100
10.1.2	Degradability of supplement protein	101
10.2	Energy supplements	101
10.2.1	Types of energy supplements	101
10.2.2	Milk responses to energy supplements	102
10.3	Protein supplements	103
10.4	Basal forages and forage supplements	104
10.5	Categorising supplements on energy and protein contents	107
10.6	Agro-industrial by-products	107
10.7	Chemical treatment of low quality roughages	108
10.8	Molasses urea blocks	111
11	Milk responses to supplements	113
11.1	Substitution for basal forage	114

11.2	How cows respond to supplements	115
11.2.1	Decreasing marginal responses	115
11.2.2	Immediate and delayed milk responses	116
11.3	Factors affecting milk responses	116
11.3.1	Quantity of basal forage	117
11.3.2	Quality of basal forage	117
11.3.3	Quality of supplement	118
11.3.4	Allocation of supplement	119
11.4	Presentation of the forage and supplements	120
11.4.1	Presentation of the forage	120
11.4.2	Presentation of the concentrates	123
11.4.3	Total mixed rations	124
11.5	Specific examples of incorrect supplementary feeding practices	126
11.5.1	Induced protein deficiencies	126
11.5.2	Feeding inappropriate supplements	127
11.5.3	Feeding milking cow supplements to young stock	127
11.5.4	Excessive use of supplements	128
11.6	Milk yield and total diet quality	128
11.6.1	Energy content of the diet	128
11.6.2	Excess dietary protein	130
11.7	When is supplementary feeding profitable?	130
11.7.1	Survival feeding	131
11.7.2	Moderately well-fed cows	131
11.7.3	Well-fed cows	131
11.7.4	Other reasons for feeding supplements	131
12	Formulating a diet	133
12.1	Information needed to formulate a diet	134
12.1.1	Cow requirements	134
12.1.2	How to formulate a diet	135
12.2	Estimating the limits of feed intake	135
12.2.1	Cow size and feed quality	135
12.2.2	Examples of intake predictions	137
12.3	Animal production level	138
12.4	Formulating a ration	140
12.4.1	Using the worksheets	140
12.4.2	Deciding on supplements	140
12.5	Computer aids to ration formulation	140
12.5.1	RUMNUT	141
12.5.2	NRC	141
12.5.3	DRASTIC	142
12.5.4	KYMILK, KYHEIF and the TDN Workbook	142
	Work sheets 1, 2 and 3	143
13	Problems with unbalanced diets	147
13.1	Some indicators of unbalanced diets	147
13.1.1	Lack of rumination	148
13.1.2	Loose manure	148
13.1.3	Low milk fat test	148
13.1.4	Low milk protein (or solids-not-fat) test	148

13.1.5	Reduced feed intake	148
13.2	Metabolic disorders and unbalanced diets	148
13.2.1	Milk fever	149
13.2.2	Grass tetany	150
13.2.3	Ketosis or acetonaemia	151
13.2.4	Lactic acidosis	151
13.2.5	Feed toxicities	152
13.3	Buffers	153
13.4	Other feed additives	154
13.5	Troubleshooting feeding problems	155
13.6	FAO guide to good dairy farming practice	156
14	Diet and milk production	159
14.1	Fate of the products of digestion	160
14.2	Milk production in the udder	161
14.2.1	What is milk?	161
14.2.2	Lactose production in the udder	161
14.2.3	Fat production in the udder	161
14.2.4	Protein production in the udder	162
14.2.5	Summarising nutritional effects on milk composition	162
14.2.6	How milk composition varies with level of concentrates fed	164
14.3	Milk production and body condition	164
14.3.1	Body condition in early lactation	164
14.3.2	Body condition in late lactation and the dry period	165
14.3.3	Summary of milk production and body condition	165
14.4	Persistency of milk production throughout lactation	167
14.4.1	Theoretical models of lactation persistency	167
14.4.2	Effects of diet on lactation persistency	169
15	Nutrition and fertility	171
15.1	Measures of reproductive performance	172
15.2	Non-nutritional factors that affect reproductive performance	174
15.3	Nutritional factors that affect reproductive performance	177
15.3.1	Energy intakes and balance	177
15.3.2	Some implications for management	179
15.3.3	Protein intakes	180
15.3.4	Intakes of minerals, trace elements and vitamins	180
16	Nutrition and young stock	183
16.1	Rearing the milk-fed calf	184
16.1.1	Colostrum feeding	184
16.1.2	Early rumen development	185
16.2	A successful early weaning recipe for calf rearing	185
16.3	Management of weaned replacement heifers	187
16.3.1	Fertility	187
16.3.2	Milk production	188
16.3.3	Heifer wastage	188
16.4	Targets for replacement heifers	188
16.4.1	Live weight	188
16.4.2	Wither height	189

16.4.3	Age of teeth eruption	189
16.5	Energy and protein requirements for heifers	190
16.6	Feeding heifers to achieve target live weights	190
17	Economics of feeding dairy cows	191
17.1	The business of dairy farming	192
17.2	Defining 'milk income less feed costs'	192
17.3	Case studies of small holder dairy farmers	193
17.3.1	Introduction to case studies	193
17.3.2	Case study 1: Formulating least cost rations	196
17.3.3	Case study 2: Feeding cows in early lactation	197
17.3.4	Case study 3: Feeding cows during the dry season	197
17.4	Determining the optimum herd size	198
17.5	Other factors influencing herd profitability	199
17.6	Improving unit returns for milk	200
17.6.1	Milk composition	201
17.6.2	Milk quality	201
17.7	Economic analyses of small holder dairy systems	204
17.7.1	Results from a survey in Thailand	204
17.7.2	Comparing farming systems in Vietnam	204
17.8	Flow charts of feeding decisions that drive profit	207
18	Body condition scoring	209
18.1	The system of condition scoring	210
18.2	Examples of body condition scores	212
18.3	Target body condition scores	213
18.3.1	Interpreting body condition scores at calving	214
18.3.2	Interpreting changes in body condition during early lactation	214
18.4	Effect of suboptimal body condition on cow performance	215
18.4.1	Effects on reproductive performance	216
18.4.2	Effects on milk production	218
19	Overcoming environmental constraints to cow performance	219
19.1	Problems with exotic genotypes	220
19.1.1	Genotype by environment interactions	220
19.1.2	Specially bred tropical dairy genotypes	221
19.1.3	Problems of confinement	222
19.2	Alleviating heat stress	223
19.2.1	Direct effects on cow performance	223
19.2.2	Indirect effects on cow performance	225
19.2.3	Designing cattle housing to minimise heat stress	225
19.2.4	Management practices to minimise heat stress	228
19.3	Sanitation and effluent management	230
19.3.1	Effluent as a liability	230
19.3.2	Effluent disposal systems	230
19.3.3	Effluent as an asset	231
19.4	Management problems specific to small holder farms	231
19.4.1	Animal and human health	231

19.4.2	Feet and leg problems	232
19.5	Importing cows and heifers from other countries	233
19.5.1	Genetic merit of imported stock	234
19.5.2	Importing young heifers	234
19.5.3	The renewed relevance of embryo transfer technology	235
19.5.4	Satisfying customer demands	235
20	Future developments in feeding management in the humid tropics	239
20.1	Determining optimum on-farm stocking capacities	240
20.2	Research and extension priorities in feeding management	242
20.2.1	Variability in nutritive value	242
20.2.2	Seasonality of quality forage supplies	243
20.2.3	Maize and its by-products	243
20.2.4	Milk to concentrate ratios in production rations	245
20.2.5	Marginal milk responses	246
20.2.6	Marginal cost of production	247
20.2.7	Diagnosis of poor farm profitability	247
20.2.8	Feeding fewer cows better	248
20.2.9	Breeding versus feeding dairy stock	248
20.2.10	Growing young stock	248
20.2.11	Farmer research	249
20.2.12	Demonstration or model farms	249
20.2.13	Minimising complexities in feeding management	250
20.2.14	The role for forage legumes	250
20.2.15	An alternative approach to developing feeding systems	251
20.3	Cassava–cowpea rotation: An innovative dairy feeding system	252
20.4	Research priorities in tropical dairy nutrition	254
20.4.1	An inventory for dairy research in the humid tropics	254
20.4.2	The goals for dairy research in the humid tropics	256
20.5	Improving current dairy feeding systems in the humid tropics	258
20.6	Future directions for small holder dairy production in the humid tropics	260
	References and further reading	263
	Glossary and abbreviations	269
Appendix 1	Temperature Humidity Index	275
Appendix 2	Conversion of units of measurements	276
Appendix 3	Currency converter for South-East Asia	278
Appendix 4	Vitamins and minerals required by dairy cows	279
Appendix 5	Tables of nutrient requirements	282
Appendix 6	Exercises from the manual	286
	Index	292
